

“We love our patients and treat them as friends and family.”

Anna D. Guanche, MD, FAAD

Bella Skin Institute is a full-service dermatology and aesthetic surgery practice directed by Dr. Anna Guanche—a board-certified dermatologist with more than 14 years of experience. The Bella Skin team cares for all types of skin conditions but places special emphasis on the areas of cosmetic dermatology and laser surgery.

What do your patients like best about you?

“We love our patients and treat them as friends and family. Patients love us because we are consumers of our own offerings, and so we clearly believe in what we are doing.”

What is your area of specialty?

“We offer a full range of cosmetic procedures/devices to enhance the appearance of the skin and reverse signs of aging. We best serve our patients by giving them optimal, specific treatment, rather than trying to recommend the same treatment for everyone.”

What concern do you frequently hear from patients?

“That they look natural after their aesthetic treatment. Our practice provides treatments that are well-planned and administered in the safest, most conservative way to ensure a natural look and minimal down time. At the intersection of proper evaluation and counseling, pretreatment care and an artistic eye is where optimal results are achieved.”

Tell us about your staff.

“Our staff has been nicknamed the ‘derm dream team’ for good reason. Our estheticians have more than 30 years experience collectively. The medical assistants are caring and experienced and understand patient needs extremely well. Our physician assistant, Ananda Fidani PA-C, trained at USC in the master’s program, and our patients love her!”

Owner/Founder Bella Skin Institute

How do you give back to the community?

“We are sponsors of the Melanoma Research Foundation’s Miles for Melanoma 5K. Every year our team, Bella’s Melanomanators, walks while spreading awareness and raising money for the cure. Bella Skin Institute is a leader in contribution to the Dermatology Foundation, which funds research for finding cures for other skin conditions.”

What does the future hold for Bella Skin Institute?

“Aquagold® is our newest technique for delivering microBotox and microfiller to the surface of the skin—a procedure that models and red carpet attendees and EVERYONE loves! We are testing out new devices for neck tightening this year so that we can acquire the most effective technology. Dr. Guanche has written a beauty book that will be published this year. Better every day. Every day better!”
